LIQUID CRYSTAL DISPLAY DEVICE

ABSTRACT OF THE DISCLOSURE

The present invention provides a liquid crystal display device comprising: a laminated protection panel composed of a $\lambda/4$ -plate, a polarizing plate and a transparent protection plate; a liquid crystal display; and a phase retarder;

wherein the laminated protection panel is disposed to a top surface of a liquid crystal display with a distance, the phase retarder is disposed between the laminated protection panel and the liquid crystal display, and the sum($\alpha_A + \alpha_B$) of awavelength dispersion(α_A) of the λ /4-plate and awavelength dispersion(α_B) of the phase retarder is in the range of 1.11 to 1.95. In this liquid crystal display device having a transparent protection plate such as a touch panel, coloring of a displayed view looked at in an oblique direction is improved while maintaining a display quality in a front direction.
